

LIFTING - TURNING - DEVICE

ALL-ROUND WELDING MADE EASY - WELDING OF VERY LARGE ASSEMBLIES

ADVANTAGES

Maximum work facilitation for all-round welding of very large or complex assemblies is offered by our lifting-turning device.

A flexible fixture for convenient and safe access to all welds through a motorised 360° rotation function.

PROPERTIES

With electro-hydraulic height adjustment, lifting columns form the basis for a comfortable and ergonomic workplace.

We adapt the frame construction to the work-piece to be clamped. Loads of up to several tonnes as well as the holding of very long and wide components are possible.

By using our sliding X-Pro or double groove profiles, the support elements and clamping elements can be positioned individually at a later date.

The lifting movement can be synchronised mechanically or electrically depending on the requirements.

One fixture for a variety of assemblies.

Highest quality, Made in Germany!
