

WELDING TABLE SYSTEM - VARIABLE POSITIONING

RAIL WELDING TABLE SYSTEM WITH MOVABLE TABLE BRIDGES

ADVANTAGES

Our table bridges are the solution for the production of variable length welded constructions.

All the features of our patented T-slot rail system in a compact design.

PROPERTIES

The table bridges are self-lifting on a rail system and can be bolted together in a grid of 100 mm.

The portability of the table bridges means that the workplace can be arranged variably or can be completely cleared away for external use.

Our rail system is designed for installation in or on concrete and can be designed in any and width as required.

Do you have large, bulky steel structures to weld?

Our variable floor rail system for movable table bridges is highly loadable and very universally applicable.

Highest quality, Made in Germany!
